

-Blind Bat-

Materials Needed:

- Blindfold

Instructions:

1. Choose one person to be 'IT' (this is the bat) and place the blindfold around their head so that it covers their eyes.
2. Set limits, don't let the students leave a certain room or mark off an area so they don't get out of hearing distance.
3. The 'IT' person will have to try to catch as many 'bugs' (other students) as possible within their area. The bat is to listen for movement from the bugs and try to catch them. (Think Marco Polo without saying "Marco, Polo".)
4. If the bat is getting close to another bug (student), bugs that aren't close to the bat can try to get their attention by making noise to get them away from that bug they were close to getting.

This also works very well in a pool setting
